WAVE BRAKE™

WaveBrake's® revolutionary bucket shape with molded-in patent-pending wave brakes reduces splashing up to **40%** for safer, easier, and more efficient mopping.

WaveBrake® Mopping Systems

Rubbermaid is the world's leading manufacturer of mop buckets.

WaveBrake® Mopping Systems improve productivity and help reduce labor costs. WaveBrake® can handle any mopping job with ease, in sizes from 26 quarts to the new 44 quart system.

DIRTY WATER BUCKET

- Separates dirty water from clean water
- Preserves the quality and cleaning power of cleaning solution
- Reduces water and chemical usage
- Helps produce cleaner, less slippery floors
- Divides liquid weight; less lifting power needed when emptying buckets

HOW IT WORKS

Traditionally, wringers release dirty water directly back into the bucket's primary cleaning water.

Rubbermaid's Dirty Water Bucket nests below the WaveBrake® Wringer to collect the dirty water and keep it separate from the cleaning solution.

WaveBrake® 44 Qt Mopping System

High capacity 44 Quart WaveBrake® mop bucket and wringer system makes easy work of even the largest mopping jobs.

- Holds up to 44 quarts for high capacity mopping
- Innovative foot pedal water release mechanism for easy emptying
- Accepts WaveBrake® Dirty Water Bucket 9C74 (see pg. 148)
- Lasts 58 times longer than comparable wringers*
- Tested to exceed 50,000 wringing cycles; average wringers* perform approximately 860 cycles
- Premium tubular steel and structural web molded plastic
- Removable casters

*Injection-molded

CLEANING: Wet Mop Selection Guide

WET MOPPING

There are several important factors to consider when choosing a wet mop. Use the guidelines on the following pages to choose the best wet mop for your floor care needs.

GENERAL MOPPING

Choose mops with high absorbency, release, and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber, synthetic, rayon, and blended fiber mops with looped ends and woven tailbands offer the best performance and launderability.

FINISH MOPPING

Look for microfiber, rayon, or synthetic mops for high absorbency and release, and construction features such as tailbands and looped ends for better floor coverage and less streaking.

LAUNDERABILITY / DURABILITY

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability and are the most durable.

SYNTHETIC

RAYON

ABSORBENCY

The absorbency of a mop refers to its ability to pick up and hold liquid. Higher levels allow faster floor drying times, leading to greater productivity and worker safety. Microfiber, rayon, and cotton yarns have the highest absorbency.

MICROFIBER

RAYON

COTTON

BLEND

RELEASE

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor. Microfiber, rayon, and synthetic yarns offer the best release of liquids.

Dust Mopping

There are several important factors to consider when choosing a dust mop. Use the guidelines on the following pages to choose the best dust mop for your floor care needs.

General Dust Mopping

Choose mops with high dust pick up and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber looped-end and twisted loop mop heads with reinforced stitching and slip-on/slide-off backing offer the best performance and launderability.

Mop Construction Features

TWISTED LOOPS

Highly effective at capturing dust and dirt. Premium twisted loops are less prone to snags, frays, and unraveling during cleaning and laundering.

LOOPED ENDS

Reduce fraying and de-plying for better durability and longer product life. More effective than cut-end mops.

CUT ENDS

Economical construction for general purpose dusting.

REINFORCED STITCHING

Reinforced, double-needle stitching at key "wear" points increases product life.

BACKING DESIGN

Slip-on/slide-off backing allows quick, easy setup for standard or breakdown mop frames.

Launderability

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability.

MICROFIBER

BLEND

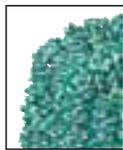

SYNTHETIC

Durability

The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops are the most durable.

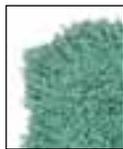

Mops with **antimicrobial fibers** have greater durability because they inhibit the bacterial growth that causes mop odor and discoloration.

MICROFIBER

BLEND

ANTIMICROBIAL

SYNTHETIC

Dust Pick Up

Dust pick up is the ability of a mop to remove dust and dirt from the floor surface. Microfiber, blended fiber, and synthetic mops have the highest degree of dust pick up.

BROOM & BRUSH CONSTRUCTION

Surface textures and types of dirt vary throughout a facility, so choosing the correct broom and brush construction is important for maximum cleaning effectiveness. Rubbermaid Commercial Products brooms and brushes offer a complete range of blocks and fill types to clean virtually any surface.

BLOCK STRUCTURES

STRUCTURAL FOAM BLOCK

Resists cracking, splitting, warping, and rotting. Helps prevent bacteria growth. Two threaded holes provide long product life.

WOOD BLOCK

A classic look that resists moisture and helps prevent cracking. Two threaded holes provide long product life.

BLOCK & FILL DESIGN

Staggered hole pattern prevents gaps in fill material for better performance. Dense fill leads to longer brush life. Flagged tips pick up fine dust and dirt particles. Flared ends allow access to corners.

FILL—NATURAL

HORSEHAIR

Very durable with a naturally flagged tip; good shear/break resistance. Will not scratch smooth or highly polished surfaces. Not for use on oily or wet surfaces.

PALMYRA

Medium to highly stiff fiber from the Palmyra Palm provides durability and good bristle recovery. Can be used wet or dry.

TAMPICO

Soft to medium stiff fiber from the Agave plant. Durable and retains shape after continual use. High resistance to heat, alkali, solvents, and acid. Can be used wet or dry.

FILL—SYNTHETIC

NYLON

Very durable with excellent abrasion resistance, shear/break strength, and bristle bend recovery. Will not stain, discolor, or absorb odors. Can be used wet or dry and resistant to alkalis and most solvents.

POLYSTYRENE

Extremely durable. Excellent bristle bend recovery and shear/break strength. Resistant to water, oils, and solvents. Not for sweeping compounds or oily surfaces.

POLYPROPYLENE

Very durable with good abrasion resistance and shear/break strength. Will not stain, discolor, or absorb odors. Resistant to solvents, acids, oils, fungus, and bacteria growth. Can be used wet or dry.

FILL—WIRE/METAL

BRASS

Provides a high degree of abrasion without severely scratching hard surfaces. Will not rust. Best for heavy cleaning of metal or brick surfaces that cannot sustain heavy scratches.

STAINLESS STEEL

Provides a high degree of abrasion and wear resistance. Resists chemicals and rust. Excellent bend recovery. Best for aggressively removing residue from metal or other resilient materials.

TEMPERED STEEL

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best for aggressively removing residue from metal parts or brick work.
