What is HACCP?
- Stands for Hazard Analysis Critical Control Points.
- It's a Process Control system.
- It is a protocol that provides guidelines.
- But it is not a legislation or law itself.

Why comply with HACCP guidelines?
- To avoid food contamination in Food Preparation Process.
- To prevent any unsafe food from leaving the process (this process could be for a food processing plant or food preparation in a restaurant).

How does it work?
1. Conduct a hazard analysis They can be :
   - Biological (eg. salmonella)
   - Physical (eg. glass in food)
   - Chemical (eg. cleaning chemical)
2. **Determine Critical Control Points (CCP's).**
3. Establish critical limits.
4. Monitor control of CCP's.
5. Establish pre-planned corrective actions to be taken.
6. Establish procedures for verifying that the system is working.
7. Establish a document and record keeping procedures.

Comply with HACCP Guidelines.
- **YOU** avoid costs associated with poor food hygiene.
- **YOU** protect your reputation and image.

LIDS FOR EVERY NEED

❶ SECURE SEALING LID

Two-seal system makes this lid the most air tight of all the Rubbermaid options and is ideal for longer term storage or air sensitive foods. Easy grip tab allows for easy removal of the lid from the pan.

❷ PEG HOLE COVER WITH HANDLE

Peg hole allows pan to be hung and dry faster, helping to prevent health risks from standing water. Rubbermaid's peg hole solution is the only NSF certified hanging solution on the market.

❸ NOTCHED COVER WITH HANDLE

NSF certified notch allows spoon to be easily available while food remains covered. Notch keeps spoon handle out of food, complying with FDA Food Code

❹ SOFT SEALING LID

Seals on insert pan help reduce air flow to food; therefore, maintaining food quality. No overlap on food pans allows easy use in transport.

**Oven up to 375° F

***DESIGNED TO
